

Ever wish you could get a handle on **your energy usage real-time?**

Now you can with NSTAR Energy Link. Energy Link is a web-based energy usage monitoring tool which allows you to receive energy data daily or real-time in a user friendly format. With more timely usage information you'll understand your load profile better which could help you negotiate lower rates, more accurately budget and forecast energy costs and reduce energy usage. Energy Link can monitor any energy source including electricity, gas, oil and water and can be customized to track parameters such as temperature and humidity. Energy Link even allows multiple users within your organization to access the data so your team can work together to keep your energy costs as low as possible.

There are several Energy Link service options designed to meet the different needs of any organization:

Software Services	Bronze	Silver	Gold
